

Powering the future of connected healthcare.

## ET3-ready Connected Emergency Services solution

Connecting EMTs with remote ER physicians for on-scene triage, enhanced situational awareness and increased efficiency to deliver the best possible patient-centered care.

Co-created with emergency services, our solution connects EMTs with remote specialists during time-critical emergencies, enabling the sharing of patient information, medical device data and live video feeds simultaneously.

### Key Benefits

-  360° view of patient's health
-  Accessible care regardless of location
-  EHR integration enabling faster decision-making
-  Access to remote specialists
-  Better ROI
-  Reduce workforce stress and burnout
-  Improved workforce efficiency

## Core components

- **Collaboration Hub** – This central platform offers a bespoke management system to facilitate scene, medical device and patient data sharing with remote ER physicians to help make informed, collaborative decisions.

- **Connected Responder** – EMTs can request remote specialist support with the click of a button to accurately diagnose and treat patients at the scene and define the right care plan.

- **Connected Vehicles** – Connecting the ambulances' medical equipment and video cameras with the available tablet and/or mobile devices, enabling the reliable sharing of a 360° view of the patient's health, with remote ER physicians to diagnose and treat patients faster.

## Benefits in more detail

**Safe reduction in avoidable ambulance conveyances and admissions to emergency departments** – By diagnosing and treating patients earlier in the care pathway, patients are only taken to hospital if that is the right place for them – saving time, money and resources.

**Providing 'See & Treat' capabilities where needed** – Anyone can share live video streams and medical data of the patient with remote specialist support for shared decision-making.

**Integration into the wider urgent and emergency care system** – Our solution connects the right people within the urgent and emergency care system and beyond to improve patient outcomes.

**A productive workforce** – Pressure is eased by providing EMTs with access to remote ER physicians whenever needed, enabling efficient and effective decision-making.
